

4 Steps to smoothly implement Prodigy in your school or district

Time is precious for school leaders. And implementing new software is typically time-consuming. But it doesn't have to be, as Prodigy has distilled the implementation process into four easy steps.

Largely hands-off for you, we can work to roll out Prodigy in as fast as two weeks.

Step 1: Tell us you're interested

If you've submitted your contact information, you're already a quarter way through the process!

We require your basic information to reach out, and pair you with an experienced Partnerships Manager who's worked with schools and districts in your region.

Step 2: Learn about each other

Your Partnerships Manager will contact you, allowing you to explain your needs. This enables us to deliver a customized Prodigy demo, answering your questions along the way.

If you like what you see and hear, we just need a list of teachers and school leaders.

Step 3: Receive personalized training

We'll deliver training sessions to all teachers and school leaders who intend to use Prodigy.

For teachers, we'll focus on introducing our math platform and explaining how to add students. We may also touch on creating curriculum-aligned assignments and accessing reports.

For school leaders, we'll focus on your admin platform, which has progress monitoring.

Step 4: Explore Prodigy

One of our goals is to make math engaging, but we're also easy to use for teachers and school leaders!

A dedicated School or District Success Manager will give you helpful resources and ongoing support. Think of this person as your Prodigy partner -- here to help throughout your Prodigy journey!
